

AIRA FRANCO

Data Engineer Student

Data Engineering student building the full data platforms that transform raw data into reliable, analytics-ready systems. Experienced in designing pipelines, modelling data, and enabling business decision-making through scalable data solutions. Adaptable to new tools, environments, and domain-specific data ecosystems.

*I have permanent work authorization in Sweden (no sponsorship required).

EDUCATION

Data Engineering

September 2025 - May 2027
Stockholms Tekniska Institut

WORK EXPERIENCE

Operations Assistant

- Inditex, 2020 - present
- Optimized inventory and logistics workflows across departments, improving product distribution efficiency under strict operational timelines. Developed a strong understanding of stock movement, demand patterns, and operational bottlenecks, directly informing my transition into data engineering for inventory and analytics systems.
 - Skills: Inventory Management, Retail Operations

English Language Teacher

Self-employed, 2015 -2019

- Founded and operated an English tutoring business alongside university studies, delivering one-on-one and group lessons for children and adults with a focus on conversation, grammar, and university exam readiness.
- Skills: Language Teaching, Lesson Planning

Production Assistant

Krispy Kreme Doughnuts Japan, 2018 - 2019

- Assisted in launching food production workflows for the first store in the region, including preparation, handling, and flow coordination.
- Skills: Food Production

SKILLS

Programming

Python (Functional and OOP) | Jupyter Notebook | Pandas (EDA, Data Cleaning, Transformation, Analysis) | FastAPI (RestAPI, CRUD) | Pydantic (Data Validation)

Database

SQL | DuckDB (OLAP) | Postgres (OLTP) | PGAdmin4 |
Data Modelling (Conceptual - Logical - Physical, Normalization)

Cloud and Containerization Azure | Databricks | Terraform (Infrastructure as Code) | Docker

Data Pipelines

ELT / ETL | Kafka (Batch and Streaming Data) | Snowflake (Data Warehousing) | DLT (Hub EL) | Dagster (Orchestration) | DBT (Transformation) | Dimensional Modelling

CI/CD Github Actions | Git | Bash | Pytest

Visualization Evidence Dashboard | Streamlit | Matplotlib | PowerBI | Grafana

AI Engineering (Upcoming Course in Fall 2026)

AI Agents in daily workflow | LLM Ops | ML FLOW (Monitoring, Tracing, Governance, Evaluate) | RAGs | Vector Database

PROJECTS

YrkesCo Vocational School Database

[Data Modelling OLTP](#) | [PostgreSQL](#) | [Docker](#) | [Github Repository](#) | [Project Blog](#).
Built a structured database to organize and manage school data in a clear and reliable way. Ensured the data is accurate and consistent, making it easy to use for daily operations and informed decisions.

Sakila Database Exploratory Data Analysis

[SQL](#) | [DuckDB](#) | [Pandas](#) | [Evidence Dashboard](#) | [Github Repository](#) | [Project Blog](#).
Explored and analyzed the Sakila dataset using SQL to identify trends, patterns, and key insights. Prepared clean, structured data for dashboards and reporting.

Data Platform for Retail Inventory & Sales

[Docker](#) | [FastAPI](#) | [Kafka](#) | [Data Streaming](#) | [ETL](#) | [Pandas](#) | [Pydantic](#) | [PostgreSQL](#) | [Supabase](#) | [SQL](#) | [DuckDB](#) | [Evidence Dashboard](#) | [Github Repository](#) | [Project Blog](#).
Designed and implemented a data platform integrating APIs, streaming events, and PostgreSQL to provide near real-time visibility into inventory and sales. Enabled tracking of product performance and stock levels, supporting faster operational decisions and reducing risk of stockouts.

DataOps Pipeline: Validated ETL with PostgreSQL

[SQL](#) | [DuckDB](#) | [Pandas](#) | [Evidence Dashboard](#) | [Github Repository](#) | [Project Blog](#).
Built a validated ETL pipeline to transform raw CSV data into clean, analytics-ready datasets. Applied data quality rules with Pydantic and Pandas, and loaded both accepted and rejected records into PostgreSQL for transparency and reliable reporting.
